

Biopolymer International Position Regarding the Implementation of Regulations No1829/2003 and No 1830/2003 on Genetically Modified Food and Feed for Gellan Gum

In response to questions regarding the GMO aspects of gellan gum, Biopolymer International is providing the following information.

Gellan gum is an extracellular polysaccharide secreted by the natural strain of the bacterium *Pseudomonas elodea* according to the definition given in Directive 98/86/EC on purity criteria for food additives. The gellan gum manufacturing process consists mainly in a fermentation step in contained use followed by extraction and purification.

Pseudomonas elodea, the micro-organism used to produce Gellan Gum, is NOT a genetically modified organism as defined in Directive 90/219/EEC¹ as amended and in Directive 2001/18/EC².

Some of the organic nutrients may be derived from crops for which genetically modified variants may be available besides the conventional ones³. In any event, the nutrients are metabolized during fermentation and their residues are removed during the extraction and purification steps.

Recital 16 of Regulation (EC) 1829/2003 draws a distinction between products made with a GMO and products made from a GMO, the former being generally exempt from labelling whilst the latter are not. Gellan gum marketed by members of Biopolymer International fall into the former category. Furthermore, the EC Commission (DG SANCO) has indicated that "substances produced by fermentation of micro-organisms do not fall in the scope of the legislation (authorisation and labelling) if produced from a conventional micro-organism, irrespective whether the substrate used for this fermentation is genetically modified or not"⁴.

Considering the aforementioned information, Biopolymer International interprets that gellan gum is neither subject to the authorisation requirements of Regulation (EC) 1829/2003 of 22 September 2003 nor to the specific traceability and labelling requirements of the Regulation (EC) 1830/2003 of 22 September 2003.
